

„BILSTEIN Suspension Technology“ – With the full range of BILSTEIN to additional business

Principles of suspension technology, product range, special applications, suspension fitting advices

Training Content

Step by step you will learn the basics of suspension technology. We explain the construction and function of the shock absorbers and explain the interaction of the combination shock absorber/vehicle springs with other suspension parts. You will learn everything about the BILSTEIN product range (BILSTEIN B1-B16) and receive product-specific knowledge including special applications and applications in motor sports. We present the effects of defective shock absorbers/vehicle springs and point out appropriate test possibilities and the correct damage diagnosis. Installation instructions, information on the disposal of shock absorbers, special tools and vehicle lowering round off the range.

Benefit

After an introduction to the basics of suspension technology and the BILSTEIN product range, the explanation of the consequences of defective shock absorbers and suspension springs is no longer a problem for you. Tips and tricks from a specialist give you the knowledge for the correct damage diagnosis.
